2d Gabor Filter Matlab Code

`[mag,phase] = imgaborfilt(A,gaborbank)`

applies the array of Gabor filters,
gaborbank, to the input image A.

gaborbank is a 1-by-p array of Gabor
objects, called a filter bank.mag and
phase are image stacks where each

the frequency domain.

Gabor Filter Bank (2D) - File Exchange - MATLAB Central

The function accepts scalar inputs only, and each call generates one filter. The filter generated is always real. Should you wish to build a complex Gabor filter, you may use (0 phase) + $j(\pi/2$ phase).

Read PDF 2d Gabor Filter Matlab Code Ukarryore

Filtering can be performed using `conv2()` or `imfilter()`.

Gabor filter is a linear filter used for edge detection. Frequency and orientation representations of Gabor filters are similar to those of the human visual system, and they have been found to be particularly appropriate for texture representation and discrimination. ...

used GLCM method for extraction image texture. And then I gave it ANN, k-NN and SVM. Instead of GLCM, I want to use Gabor Wavelet results. When I applied the code on an image I found 64*64 GT matrice for each image. So, could you let me know how I can give these result into classifier input?
