utilize elements of both, often within the same study. The term descriptive research refers to the type of research question, design, and data analysis that will be applied to a given topic. Descriptive statistics tell what is, while inferential statistics try to determine cause and effect.

41.1 WHAT IS DESCRIPTIVE RESEARCH?

Descriptive research can be explained as a statement of affairs as they are at present with the researcher having no control over variable. Moreover, “descriptive studies may be characterised as simply the attempt to determine, describe or identify what is, while analytical research attempts to establish why it is that way or how it came to be” [1].

Descriptive Research - Research-Methodology

Descriptive research methods are pretty much as they sound — they describe situations. They do not make accurate predictions, and they do not determine cause and effect. There are three main types...

The 3 Basic Types of Descriptive Research Methods

The descriptive research analysis is a straightforward analysis. It explains the “what” about a topic, by using data, statistics, and trends. It employs the use of many common characteristics companies already have access to, like case studies, surveys, and customers.

What is Descriptive Research Analysis

Survey research means collecting information about a group of people by asking them questions and analyzing the results. To conduct an effective survey, follow these six steps: Determine who will participate in the survey Decide the type of survey (mail, online, or in-person)

Doing Survey Research | A Step-by-Step Guide

Descriptive research is used to describe characteristics of a population or phenomenon being studied. It does not answer questions about how/when/why the characteristics occurred. Rather it addresses the "what" question. The characteristics used to describe the situation or population are usually some
