The Dictionary of Hallucinations is an alphabetical listing of issues pertaining to hallucinations and other misperceptions. They can be roughly divided into five categories: 1. Definitions of individual hallucinatory symptoms 2. Medical conditions and substances associated with the mediation of hallucinations 3.

### A Dictionary of Hallucinations: 9781441912220: Medicine ...

A Dictionary of Hallucinations is designed to serve as a reference manual for neuroscientists, psychiatrists, psychiatric residents, psychologists, neurologists, historians of psychiatry, general practitioners, and academics dealing professionally with concepts of hallucinations and other sensory deceptions.

### A Dictionary of Hallucinations: 9781489984012: Medicine ...

A Dictionary of Hallucinations is highly researched, thoughtfully and logically constructed, and, except for some minor quibbles, makes sense as a whole. Even the entries on color blindness, while not clinically useful, belong in an academic discussion of misperception that places color blindness in the same general area as hallucination.

If you're like most folks, you probably think hallucinations have to do with seeing things that aren't really there. But there's a lot more to it than that. It could mean you touch or even smell...

### What causes hallucinations? - WebMD

Hallucinations are where someone sees, hears, smells, tastes or feels things that don't exist outside their mind. They're common in people with schizophrenia, and are usually experienced as hearing voices.

Hallucinations can be frightening, but there's usually an identifiable cause. For example, they can occur as a result of:

**Hallucinations and hearing voices - NHS**

to have hallucinations. verb (used with object), hal·lu·ci·nat·ed, hal·lu·ci·nat·ing. to affect with hallucinations.

**Hallucinate | Definition of Hallucinate at Dictionary.com**

Noun hallucination (countable and uncountable, plural hallucinations) A sensory perception of something that does not exist, often arising from disorder of the nervous system, as in delirium tremens; a delusion. Hallucinations are always evidence of cerebral derangement and are common phenomena of insanity.

**hallucination - Wiktionary**

Hallucination, the experience of perceiving objects or events that do not have an external source, such as hearing one's name called by a voice that no one else seems to hear. A hallucination is distinguished from an illusion, which is a misinterpretation of an actual stimulus.

**Hallucination | psychology | Britannica**

A hallucination is something you see, hear, feel, smell, or taste that isn't really there. Hallucinations can happen through any of the five senses, but the most common types are visual and auditory (hearing) hallucinations. 1
