## **Step-by-Step Guide**

Blockchain technology can enhance the basic services that are essential in trade finance. At its core, blockchain relies on a decentralised, digitalised and distributed ledger model. By its nature, this is more robust and secure than the proprietary, centralised models which are currently used in the trade ecosystem.

## **6 Essential Blockchain Technology Concepts You Need To Know**

The blockchain can record contracts between free individuals, and if enforcement mechanisms can be coded in to create self-enforcing 'smart contracts', we have a system for building encoded law that bypasses states. Bitcoin and other blockchain technologies, though, are empowering right now precisely because they are underdogs.

Fintech industry impact with blockchain. According to PWC's study of financial services and fintech, about 77 percent of the financial services industry is planning to adopt blockchain by 2020 ...

## **How fintech is revolutionising with blockchain technology**

At its core blockchain is a database technology. What makes blockchain unique as a database, however, is its distributed nature. This means that its software sits on a network of separate computers (called nodes). Each node is required to verify transactions and store the same records in the database it hosts.
