The State of Fluid Web Typography | by Matej Latin ...

Fluid typography is the idea that font-size (and perhaps other attributes of type, like line-height) change depending on the screen size (or perhaps container queries if we had them). The core trickery comes from viewport units.

Simplified Fluid Typography | CSS-Tricks

It's worth looking at our more recent post Simplified Fluid Typography for practical, clamped, viewport-based type sizing. That would scale font-size from a minimum of 16px (at a 320px viewport) to a maximum of 22px (at a 1000px viewport). Here's a demo of that, but as a Sass @mixin (which we'll cover later).

Embracing fluid typography might be easier than you think. It has wide browser support, is simple to implement and can be achieved without losing control over many important aspects of design. Unlike responsive typography, which changes only at set breakpoints, fluid typography resizes smoothly to match any device width. It is an intuitive option for a web in which we have a practically infinite number of screen sizes to support.
