Global warming of the magnitude anticipated — a 1°C to 4°C (1.8°F to 7.2°F) increase in global mean temperatures over this century — will cause major changes in ecosystem distributions in the United States. In the eastern United States, these changes will result in a general northward shift in vegetation types.

How to Halt Global Warming for \$300 Billion - Bloomberg

Global warming refers to global averages, with the amount of warming varying by region. Since the pre-industrial period, global average land temperatures have increased almost twice as fast as global average temperatures. This is due to the larger heat capacity of oceans and because oceans lose more heat by evaporation.

Global warming - Wikipedia

Global warming, scientists say, is responsible not only for shrinking ice caps but also for a surge in extreme weather that is causing heat waves, forest fires, and droughts. The polar bear standing on a chunk of shrinking ice, apparently stranded, has become a familiar image, a symbol of the devastating effects of climate change.

Global Warming and Other Eco-myths: How the Environmental Movement Uses False Science to Scare Us to Death. Forum. 2002. ISBN 978-0-7615-3660-4.

Ronald Bailey - Wikipedia

Less global warming Human activity is overloading our atmosphere with carbon dioxide and other global warming emissions. These gases act like a blanket, trapping heat. The result is a web of significant and harmful impacts, from stronger, more frequent storms, to drought, sea level rise, and extinction.
