What is Machine Learning for beginners?

Following on from my earlier post on Data Science, here I will try to summarize and compile the major practical concepts of Machine Learning in a handy, easy to use, language-agnostic, reference guide format. Most of the information is presented as short and succinct bullet points. I expect this to be especially valuable to beginners or as a quick look-up for those with a basic level of ...

1.1. INTRODUCTION 3 Human designers often produce machines that do not work as well as desired in the environments in which they are used. In fact, certain characteristics of the working environment might not be completely known at design time. Machine learning methods can be used for on-the-job improvement of existing machine designs.

CNC machining is the most widely used subtractive manufacturing technology. In CNC, material is removed from a solid block using a variety of cutting tools to produce a part based on a CAD model. Both metals and plastics can be machined with CNC. CNC produces parts with tight tolerances and excellent material properties.
