RADAR stands for Radio Detection and Ranging System. It is basically an electromagnetic system used to detect the location and distance of an object from the point where the RADAR is placed. It works by radiating energy into space and monitoring the echo or reflected signal from the objects. It operates in the UHF and microwave range.

INTRODUCTION. 3D radar is a Radar which provides a three dimensional view of Range, Altitude and Direction. The information provided by 3D radar has long been required, particularly for air defence and interception. Before 3D radars, this was achieved with separate search radars (giving range and azimuth) and a third separate radar for height finding that could determine altitude.
