Enhanced Voice Services (EVS) is a superwideband speech audio coding standard that was developed for VoLTE. It offers up to 20 kHz audio bandwidth and has high robustness to delay jitter and packet losses due to its channel aware coding and improved packet loss concealment. It has been developed in 3GPP and is described in 3GPP TS 26.441.

ISO 15118 enables the integration of EVs into the smart grid (aka vehicle-2-grid or vehicle-to-grid). A smart grid is an electrical grid that interconnects energy producers, consumers, and grid components like transformers by means of information and communication technology, as illustrated in the image below.

### What is ISO 15118? - V2G Clarity

The two IEC International EV Standards reflect a global consensus on the plugs and sockets that are needed to charge EVs. They pull together the huge volume of research and development surrounding EV charging mechanisms from around the world, whilst addressing the diverse electricity infrastructure and regulations in different countries.
