Mazda 3 Service Manual - Valve Clearance Adjustment [Mzr 2 ...

They transfer the downward motion of the cams on the camshaft to depress the valves. There is a thin clearance of about 8 thousandths of an inch with the engine cold. As the engine heats the clearance reduces. Over tightening causes the valve edges to burn, too much clearance causes tapping. Manual tappets get quieter usually as the engine heats.

If measuring valve clearance from camshaft side, set intake and exhaust valve clearance to .009 inch. 1. Start engine and allow to reach normal operating temperature, then shut engine off. 2. Position No. 1 piston at top dead center compression stroke, then adjust the following valves: intake nos. 1 and 2; exhaust nos. 1 and 3. 3. On all models, rotate engine 360° and adjust remaining valves. 4. Tighten locknuts, then recheck valve clearances.

Mazda Workshop Manuals > 626 L4-1998 cc 2.0L SOHC FE (1987 ...

The Mazda FE-DOHC was the DOHC variant of the FE. The official Mazda engine codes are FE-DE and FE-ZE, depending on output level. It is still commonly called the FE3 because of its head castings. The FE-DOHC shares the same dimensions as the original FE-SOHC, including the square 86 mm bore x stroke and it has an ideal 1.74 rod/stroke ratio.

Mazda FE-DOHC engine - Wikipedia

take off the valve cover. set to top dead center with piston 1 on compression stroke. you can check if it is by taking the dist cap off and seeing if its on number 1 now do cylinder 1 and 2 intake and 1 and 3 exhaust. rotate the crankshaft 360 degree so piston 4 is on the compression, you can check same as the first time with the dist.

Valve clearances are the small gaps between the tops of the valve stems and the part of the mechanism which presses on them to open the valves. Check the clearances at regular intervals as specified in the car service schedule, and adjust if necessary. Reset the clearances whenever the cylinder head has been removed.
