Neurodynamics Of Cognition And Consciousness

This book addresses dynamical aspects of brain functions and cognition. Experimental evidence in humans and other mammals indicates that complex neurodynamics is crucial for the emergence of higher-level cognition and consciousness. Dynamical neural systems with encoding in limit cycle and non-convergent attractors have gained increasing popularity in the past decade.

(PDF) Neurodynamics of Cognition and Consciousness

A ubiquitous property of neurodynamics of consciousness is evolution from vague, fuzzy, and unconscious states to more concrete, and conscious. These neurodynamical processes are the essence of perception, cognition, and behavioral decision-making. More specific and conscious states correspond to recognized patterns and executed decisions.

Neurodynamics of consciousness 5 2. Neurodynamics 2.1. Dynamical systems Dynamical cognitive science has been defined as “a confederation of research efforts bound together by the idea that natural cognition is a dynamical phenomenon and best understood in dynamical terms” (Van Gelder, 1999, p. 243). Within this confederation, the job of the
