No Engine Crank Or No

Problems That May Cause a No-Crank Condition. Undercharged or failed battery. Corroded or damaged connectors or wires. Bad camshaft or crankshaft sensor. Failed starter motor or solenoid (relay) Bad ignition switch. Bad or misadjusted neutral safety switch. Engine mechanical problems.

Engine Won't Crank Over | AxleAddict

22 Oct. With a no crank/no start condition, the first thing to check is the battery. The battery or battery problems are the number-one cause of this type of no-start condition. A quick way to check your battery is to turn your headlights on. If the headlights come on and are nice and bright, not dim or dull, then it's likely your battery and its connections are okay.

Engine No Crank/ No Start | EricTheCarGuy

There are two basic types of no-start conditions: crank/no start and no crank/ no start. When an engine cranks, you can hear it spin, but the engine doesn't catch and run on its own. So with a no crank/no start, you don't hear the engine moving at all. You might hear a click or buzz but other than that, nothing.

Solving Automotive No-Start Problems | EricTheCarGuy

It's easy to get frustrated when you get in your car and the engine won't turn over. Don't worry quite yet. If you're at home, there are three things you can test that will tell you what's wrong—and you might have an inexpensive repair on your hands. The most likely problem is a dead or drained battery.

What to Do When Your Car Won't Start or Turn Over

When your engine cranks but won't start or run, it could mean your engine is having trouble producing a spark, getting fuel, or creating compression. The most common causes are problems in the ignition (for example, a bad ignition coil) or fuel system (for example, a clogged fuel filter).

My Engine Cranks but Won't Start | AxleAddict

SYMPTOM/CONDITION: The customer will experience a no engine crank AND a no engine start condition. Also, the remote keyless entry (RKE) system will not operate. This condition may be due to an electrostatic discharge (ESD) from the ignition key into the Wireless Control Module (WCM), causing the WCM to electronically lockup.

TSB - No Engine Crank Or No Engine Start Due To Electronic ...

If you have a late model GM vehicle and turn the key only to hear nothing, you'll most likely think you have a dead battery—and you may. But a no start, no crank, no click condition can be far more involved than that. In the old days, power flowed through the ignition switch and down to the starter solenoid. Not anymore.
