Plant Biochemistry. Plants produce most of the biomass on earth, provide directly or indirectly all food for humans and increasingly will become the source of sustainable biomaterials that replace non-renewable resources. MSU has one of the largest groups of plant biochemists in North America, most of whom are affiliated with the Department of Biochemistry and Molecular Biology, the Department of Plant Biology or the DOE Plant Research Laboratory.

Abstract. Abstract Recent advances in the cell, developmental, and molecular biology of alkaloid biosynthesis have heightened our appreciation for the complexity and importance of plant secondary pathways. Several biosynthetic genes involved in the formation of tropane, benzyloquinoline, and terpenoid indole alkaloids have now been isolated. The early events of signal perception, the pathways of signal transduction, and the function of gene promoters have been studied in relation to the ...

Biochemistry is closely related to molecular biology, the study of the molecular mechanisms of biological phenomena. [5] Much of biochemistry deals with the structures, functions, and interactions of biological macromolecules , such as proteins , nucleic acids , carbohydrates , and lipids , which provide the structure of cells and perform many of the functions associated with life.
