Algebra 2 Worksheets (pdf) with answer keys
In Algebra 1, students solves linear and quadratic equations, and learned how the two processes are based on the same logical principles. In this unit, we extend these processes to solve a greater variety of equations, like rational and radical equations. We learn that we may sometimes get extraneous solutions. We also solve systems that include quadratic equations, and learn how we can use ...

To calculate that constant, divide the coefficient of the x-term (which is –12) by 2 (giving –6) and square the result ((-6)2 = 36). Adding 36 to both sides of the original equation will complete the square: notice that x2 – 12x + 36 is indeed a perfect square trinomial because it can be factored as (x – 6)2. 7. C.

Algebra 2 Practice Questions - Study Guide Zone
In Algebra 2, students learn about the analog between polynomials and the integers, through adding, subtracting, and multiplying polynomials. This also paves the way for factoring and dividing polynomials.
