G. P. Nikishkov

The first step for the Ritz-Galerkin method is to obtain the weak form of (113). This is accomplished by choosing a function v from a space U of smooth functions, and then forming the inner product of both sides of (113) with v , i.e., $-\int \nabla^2 u, v = \int f, v$. (114) To be more

problem in weak formulation. Let us introduce Galerkin's method with an abstract problem posed as a weak formulation on a Hilbert space, namely, . find $u \in V$ such that for all $v \in V$, $(u, v) = (f, v)$. Here, (\cdot, \cdot) is a bilinear form (the exact requirements on (\cdot, \cdot) will be specified later) and is a bounded linear functional on V .
