Education about the importance of sleep health and effective countermeasures for fatigue should form the basis for any fatigue management plan. Fatigue countermeasures refer to a range of strategies aimed at either minimising or counteracting the effects of fatigue and the dangerous state of drowsiness when driving. It is important to emphasise fatigue countermeasures can only temporarily ...

IIW Recommendations. The version currently used in LIMIT is based on the Recommendations for Fatigue Design of Welded Joints and Components, Second Edition with updates from 2014, International Institute of Welding. The fatigue strength assessment in LIMIT is based on SN-curves and damage calculation. Nominal and structural stress concepts are supported.

For purposes of evaluating fatigue, weld joints are divided into several classes. The classification of a weld joint depends on: the macroscopic geometry of the pieces welded, the direction of the cyclic stresses,
